

GeoRSCT certificate as an R/Ssup/N simplex

relevant geospatial signal

R

$$R + Ssup + N = 1$$

$$\alpha = R / (R + N)$$

GeoRSCT use:

Does a model score reflect
usable signal, extra structure,
or task/noise difficulty?

clean signal

ambiguous / mixed

superfluous-heavy

noise-heavy

Ssup

superfluous structure

N

noise / contamination
